

## JST International Symposium on Dependable VLSI Systems 2012

9:00-19:00 December 1st 2012  
AKIBA Hall, Tokyo Japan

This is an announcement of the first JST International Symposium of Dependable VLSI Systems to be held in Tokyo on December 1st, 2012. The purpose of this symposium is to share the results of a research program entitled, "Dependable VLSI Systems" among professionals having special interest in dependability of micro-electronic systems around the world and promote cross-layer collaboration for dependable operation of systems.

This unique program, sponsored by JST (Japan Science and Technology Agency), was initiated in 2007 for establishing basic VLSI technologies to enhance the dependability of VLSI systems, which could range from automobile, plant, transportation, telecom, data processing to aerospace systems. The program currently has 11 projects running that address various issues, some arising from miniaturization on the one hand and complexity on the other, including five projects to be completed this fiscal year.

### Symposium Highlights:

- 1)Sharing Grand Challenges for Dependable Systems from Different Aspects  
Speakers: Sani Nassif (IBM), Subhasish Mitra (Stanford U), Koichiro Takayama (Fujitsu Lab.)
- 2)Exploring International Coordination with Foreign Projects  
Speakers: Rajesh Gupta (UCSD), Joerg Henkel (Karlsruhe Institute of Tech.)
- 3)Presenting Research Achievements by 11 Teams of JST DVLSI Program
- 4)Discussing in Panel on Cross-Layer Optimization for Dependable Systems
